

SWISS COTTON FABRIC

Natural performance . . .

Please follow these simple care instructions to ensure continuous natural performance from EtaProof fabrics.

Not suitable for machine wash

- Gently brush or sponge off any dirt
- Handwash with care using pure liquid soap
- Do not use any softening agent
- Rinse twice in lukewarm water
- Re-shape the garment on a hanger avoiding direct sunlight
- Iron carefully on a warm setting - this process re-activates the DWR treatment

After several washes your garment may require re-proofing. Please consult your local specialist retail store for further advice.

This care instruction is to be regarded as recommendation without guarantee of success, since proper care and responsibility must be left to discretion of the processor/user based on the circumstances of each individual case.
